Application Development Summative

Group 2

Names:

Lalumbe Mulweli : ST10131296

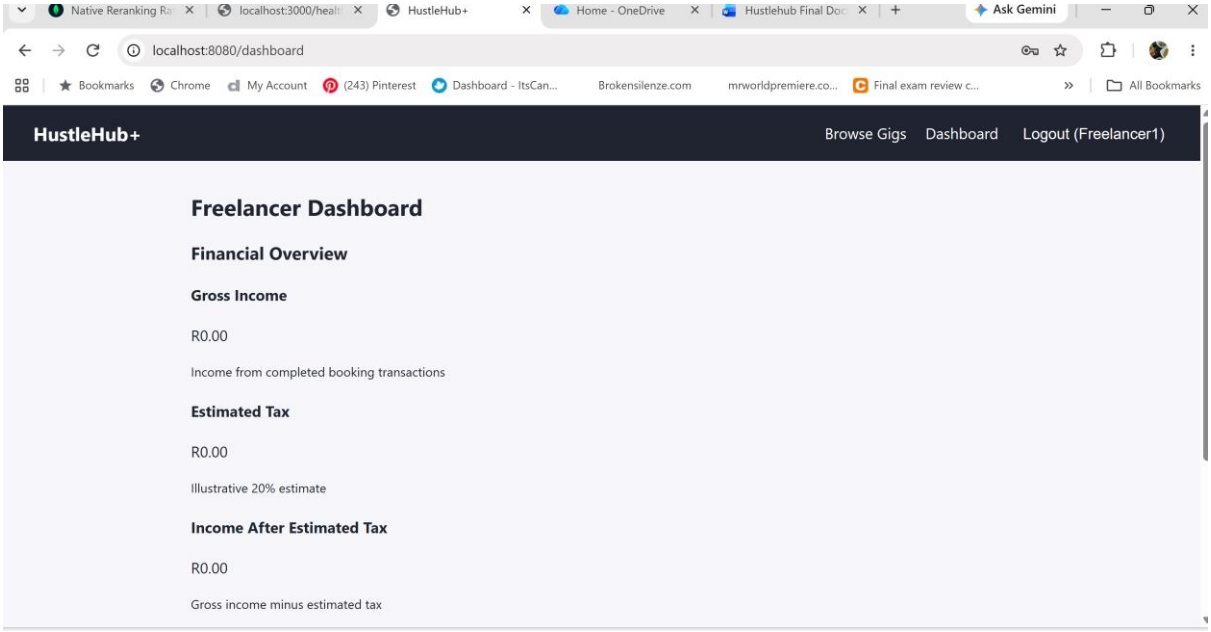

Andiswa Mchunu : ST10545261

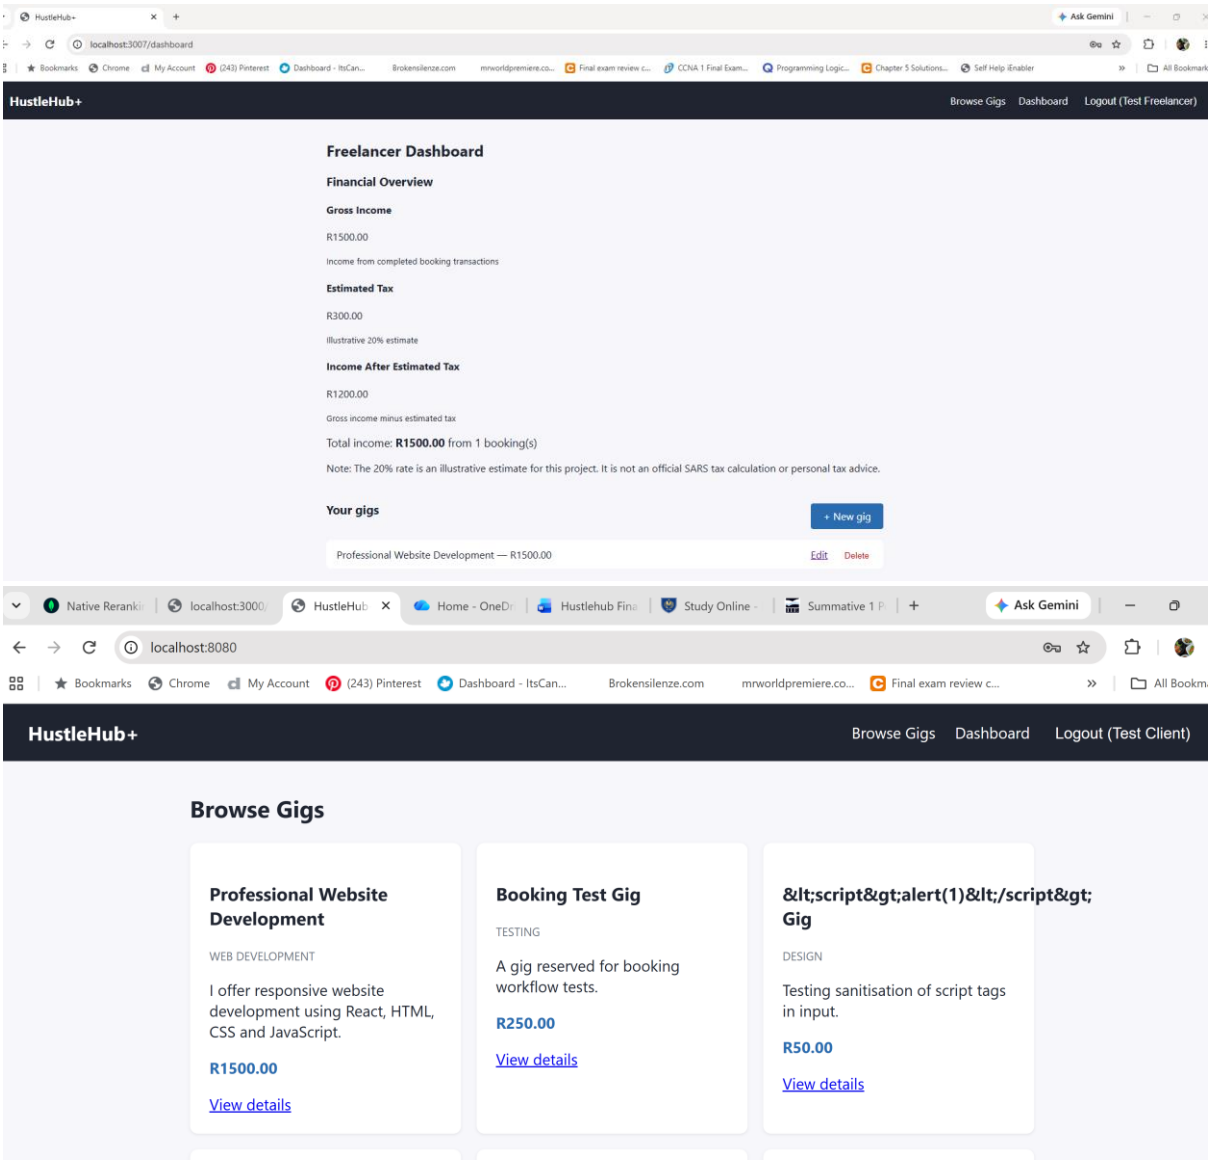

Nosihle Dibandlela : ST10545690

Richard Ramokgopa : ST10359693

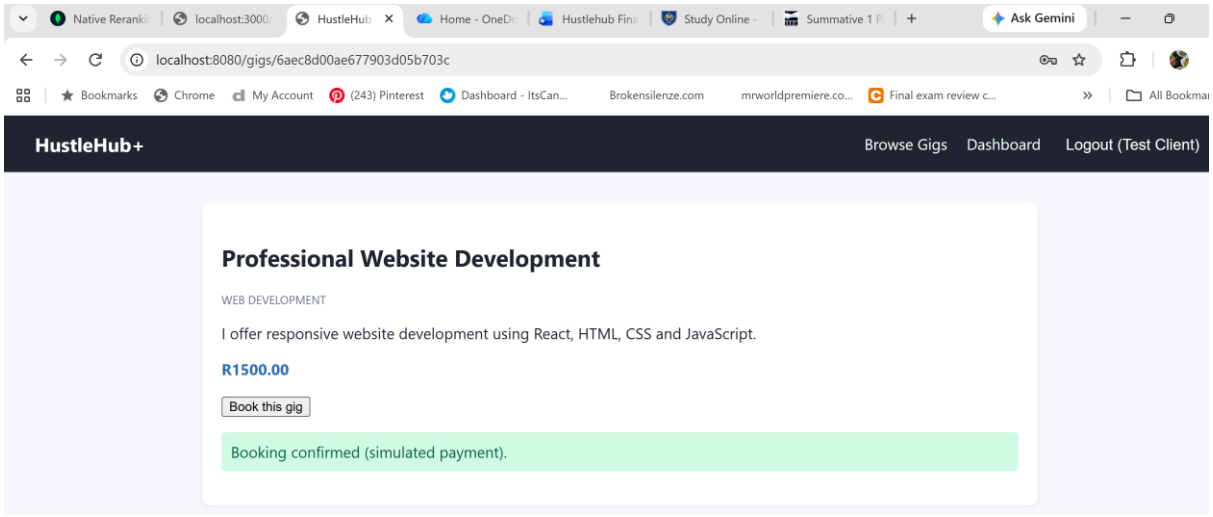

Github Repository Link: https://github.com/lalumbem/HustleHub-.git

1. Freelancer dashboard showing gross income, estimated tax and after-tax income.

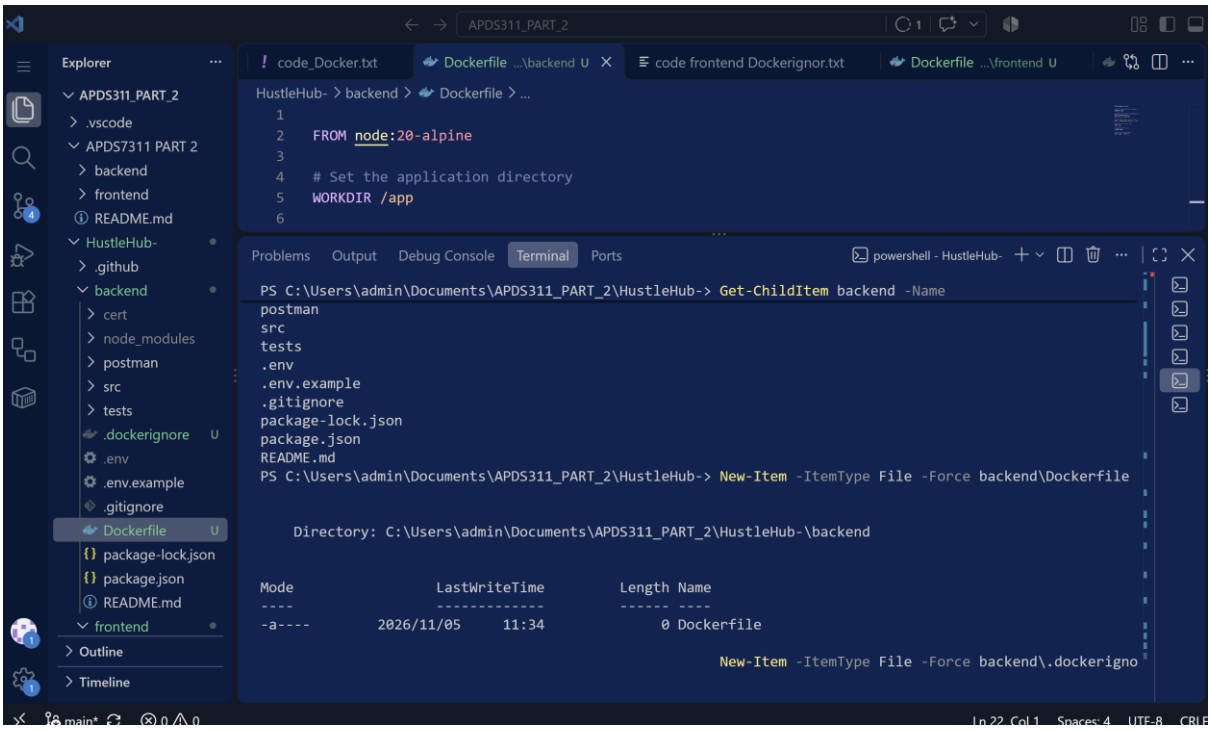

2. Successful booking confirmation.

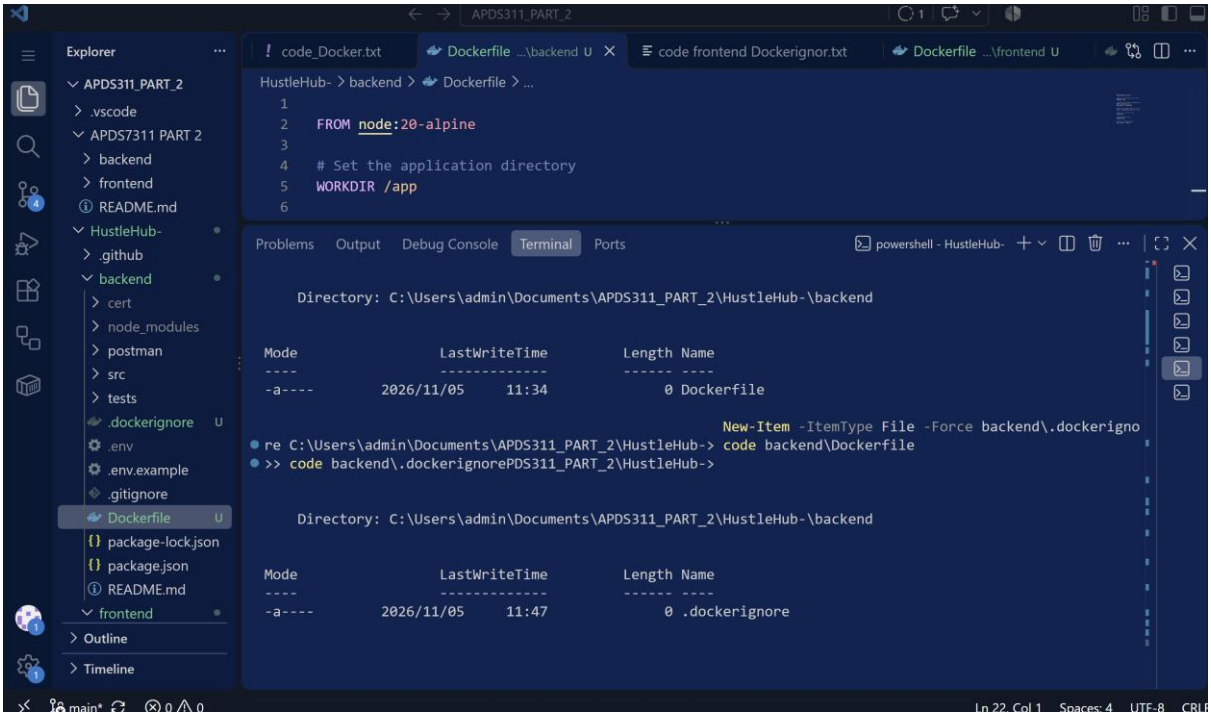

- Therefore, the Market place page works for Clients because Freelancer can register and create a gig. Client is able to register and brows available gigs. Clients can view gig details and book the service and lastly the application confirms the booking.

3. Both Docker containers running (docker compose ps).

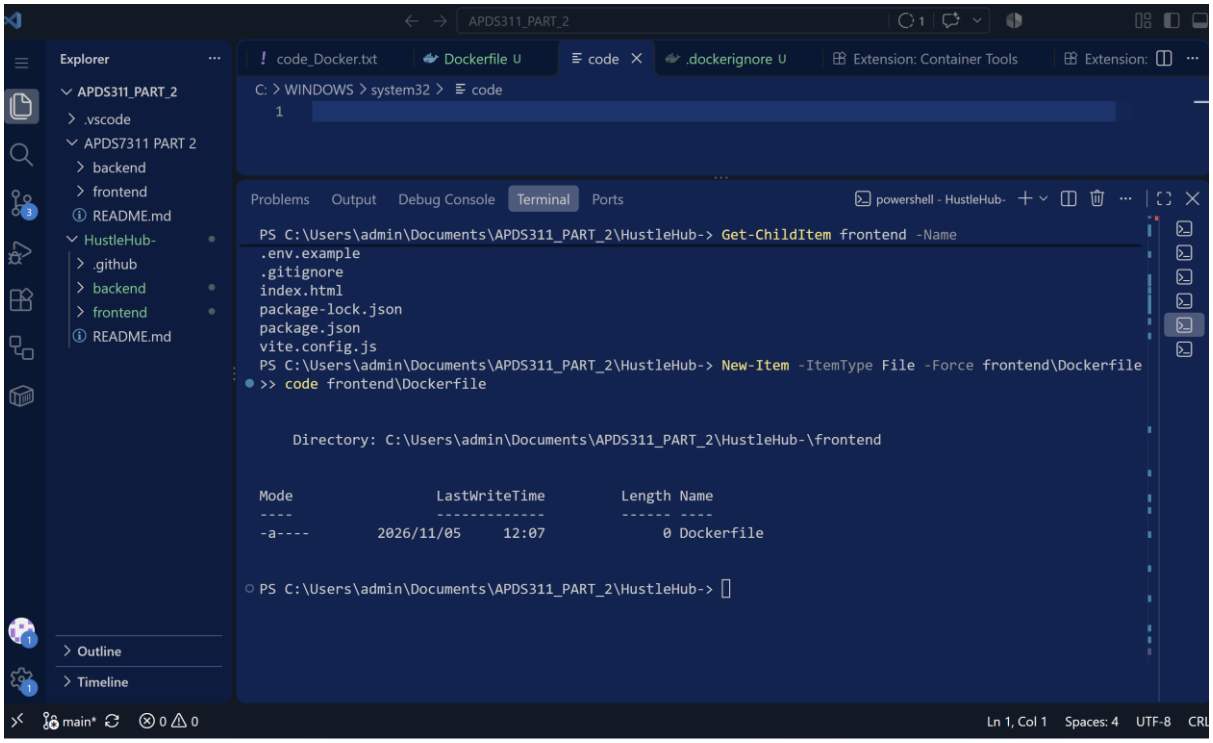

- Backend Dokerfile

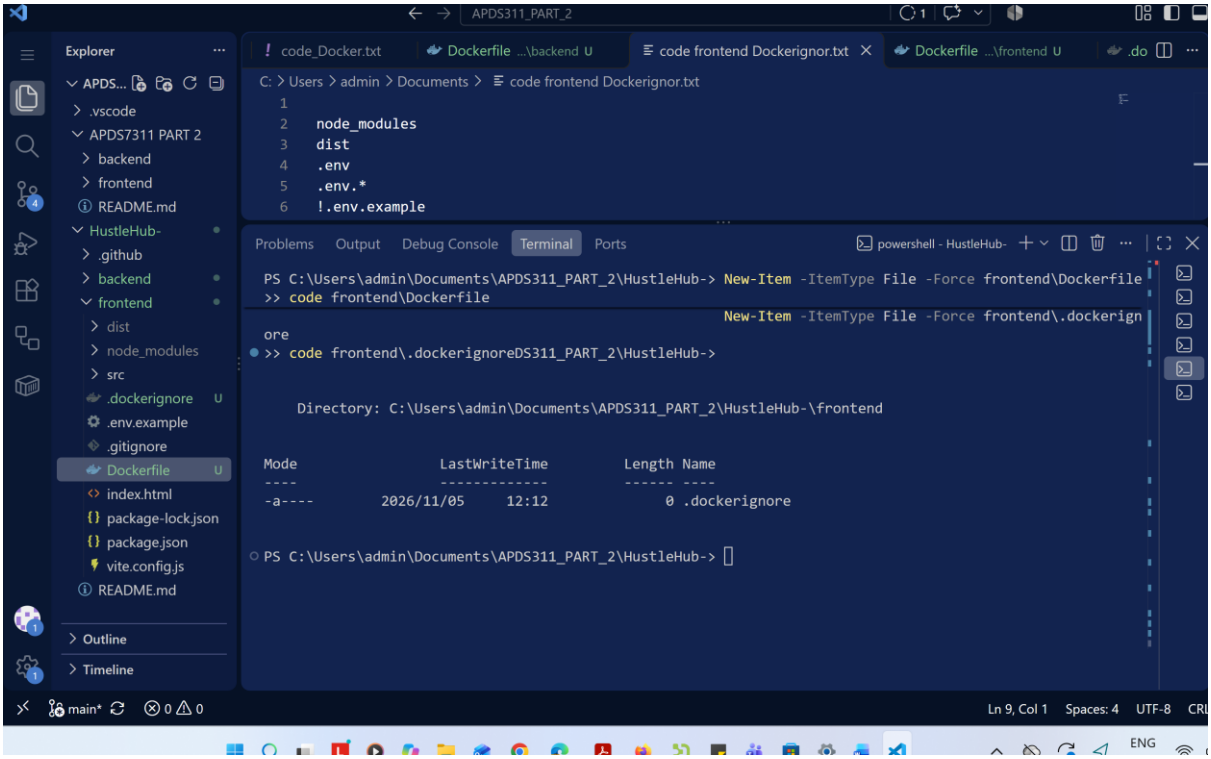

- Backend Docker-ignore

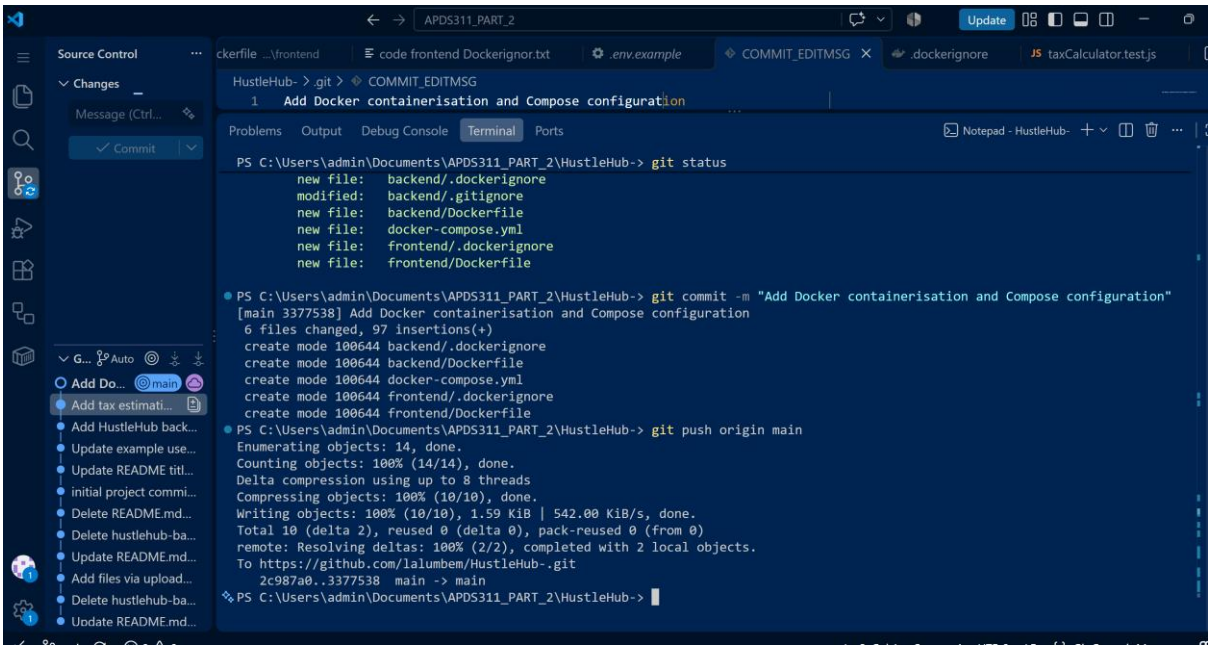

- Frontend Docker file

- Frontend Docker- ignore

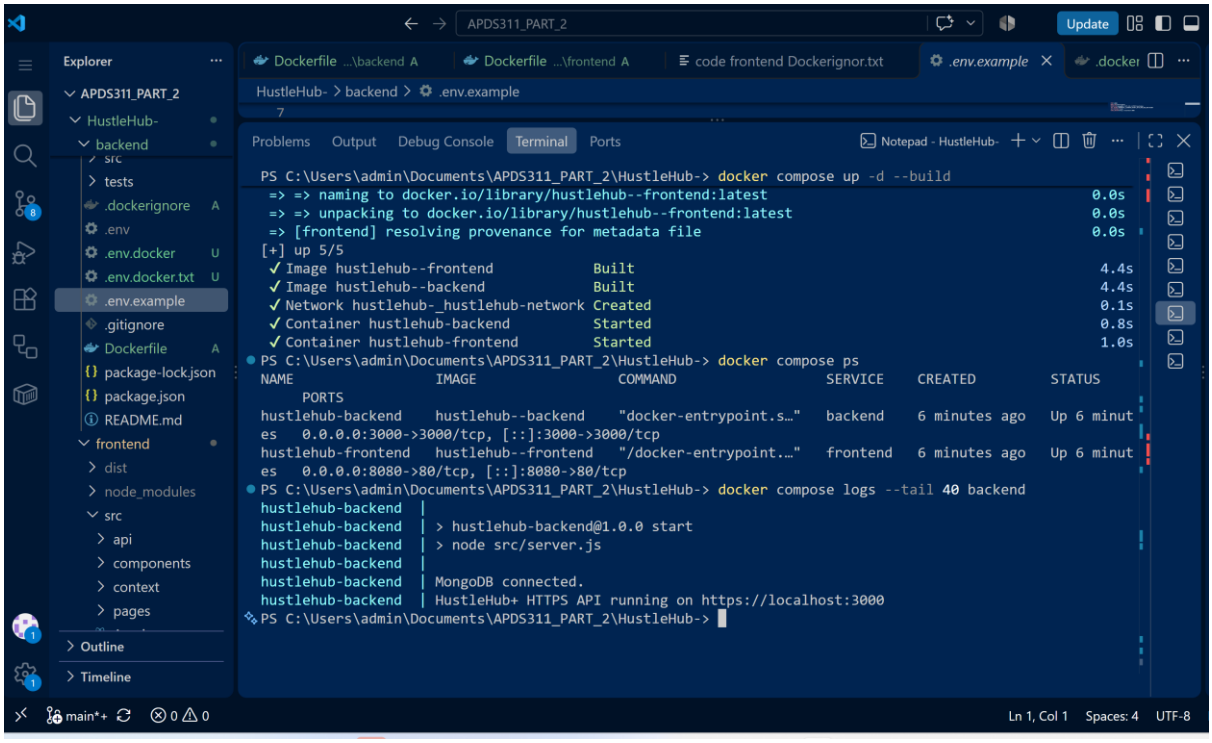

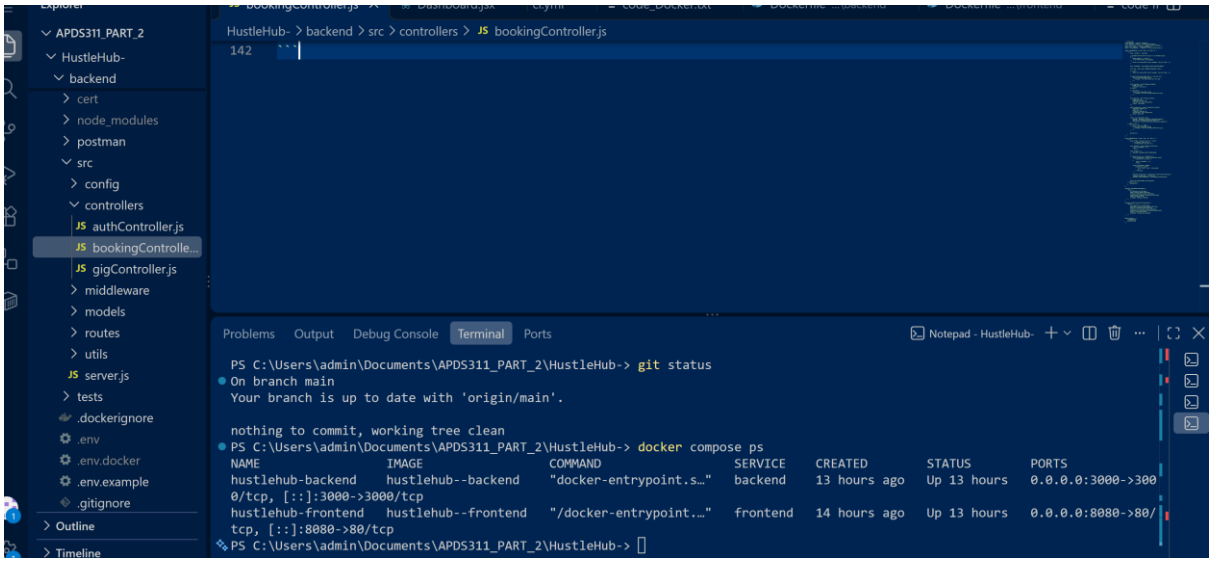

- Adding both frontend and backend containers

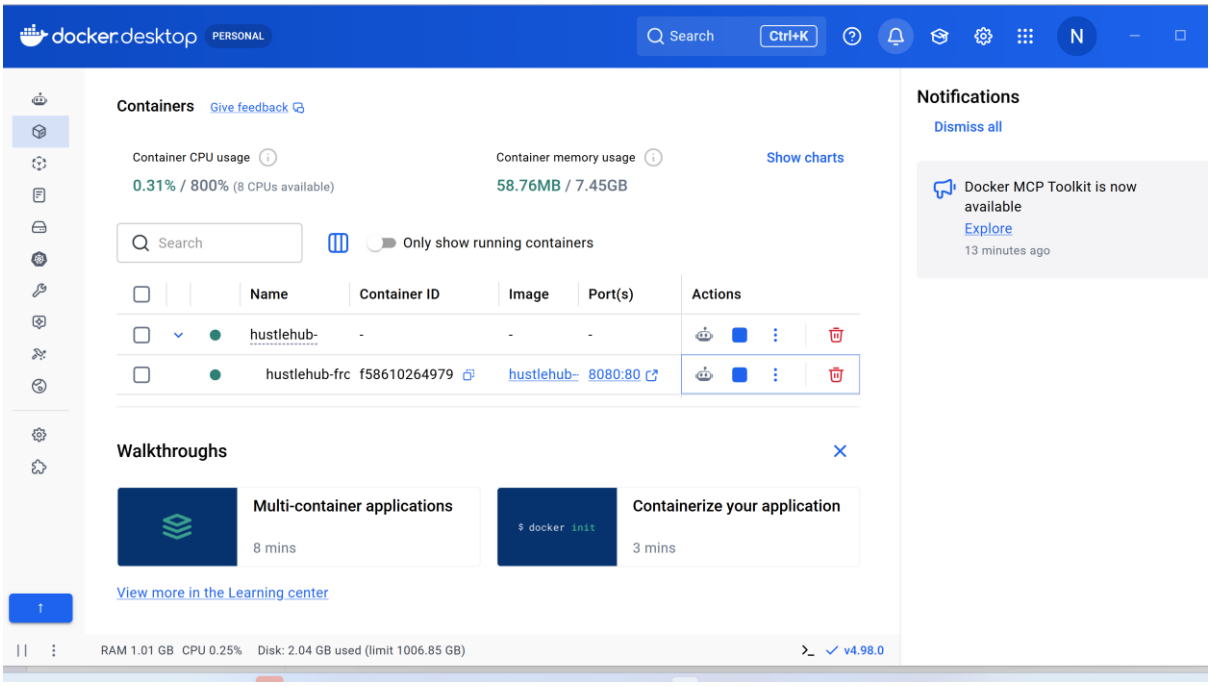

- The docker composes ps output and backend logs:

Both containers are running, and your backend has successfully connected to MongoDB. The logs confirm that: MongoDB connected successfully. Backend HTTPS API running on port 3000. Frontend running on port 8080 and both Docker containers are Up.

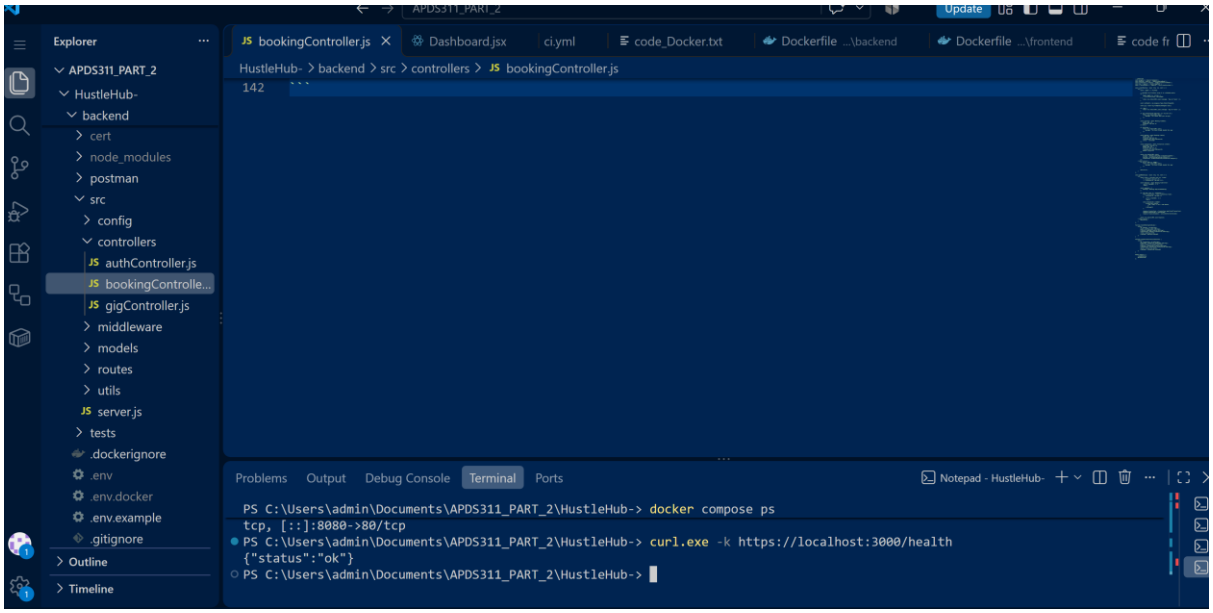

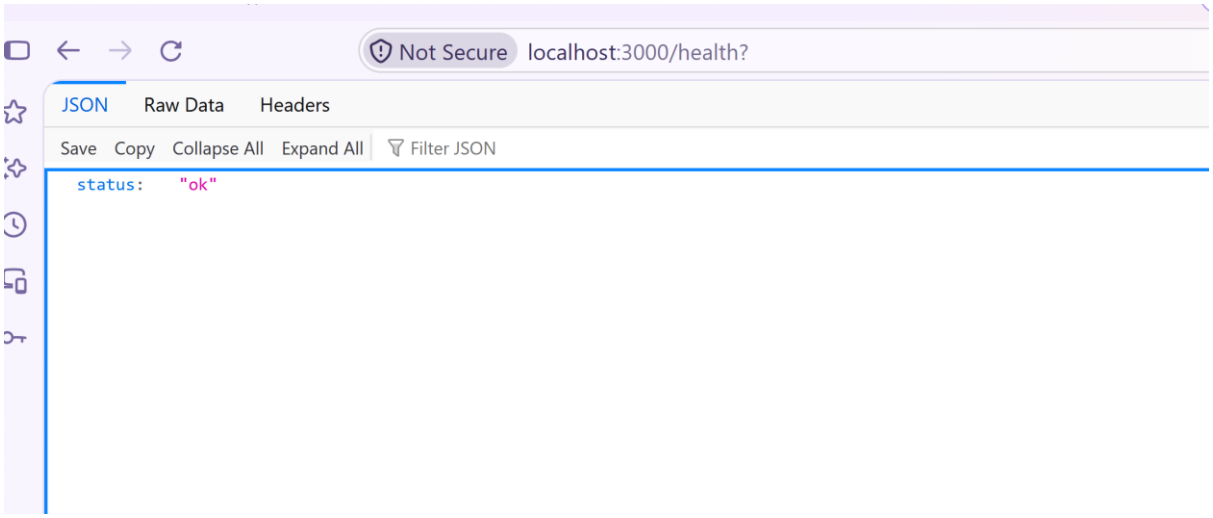

- Docker desktop shows Hustlehub docker containers

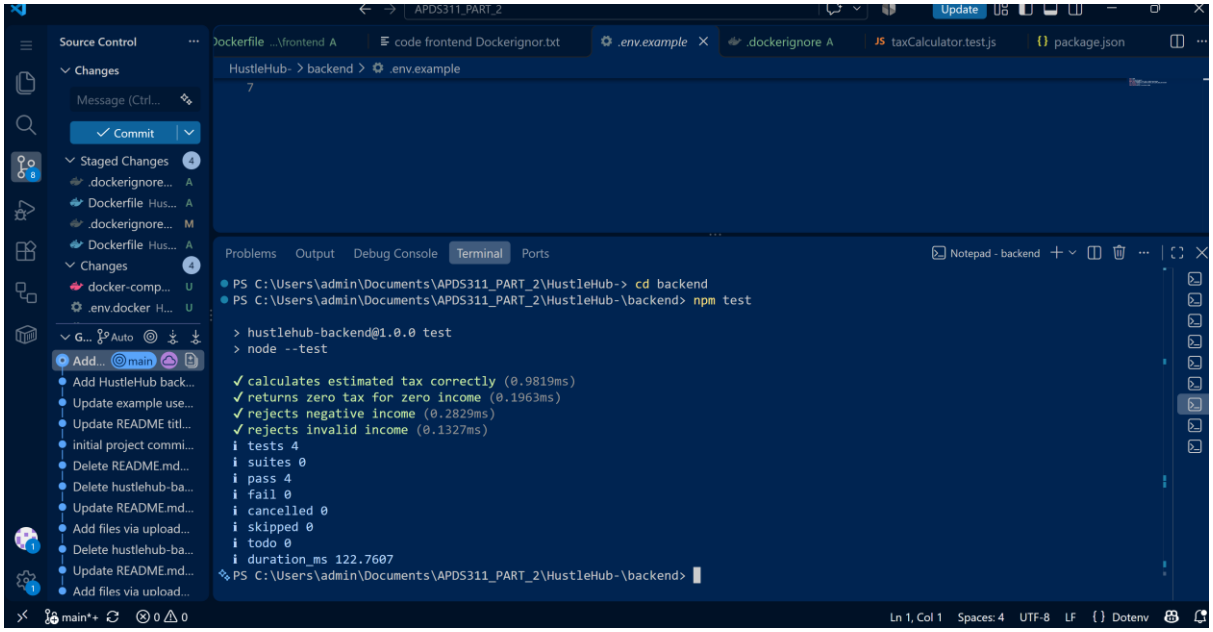

4. Backend health response ({"status":"ok"}).

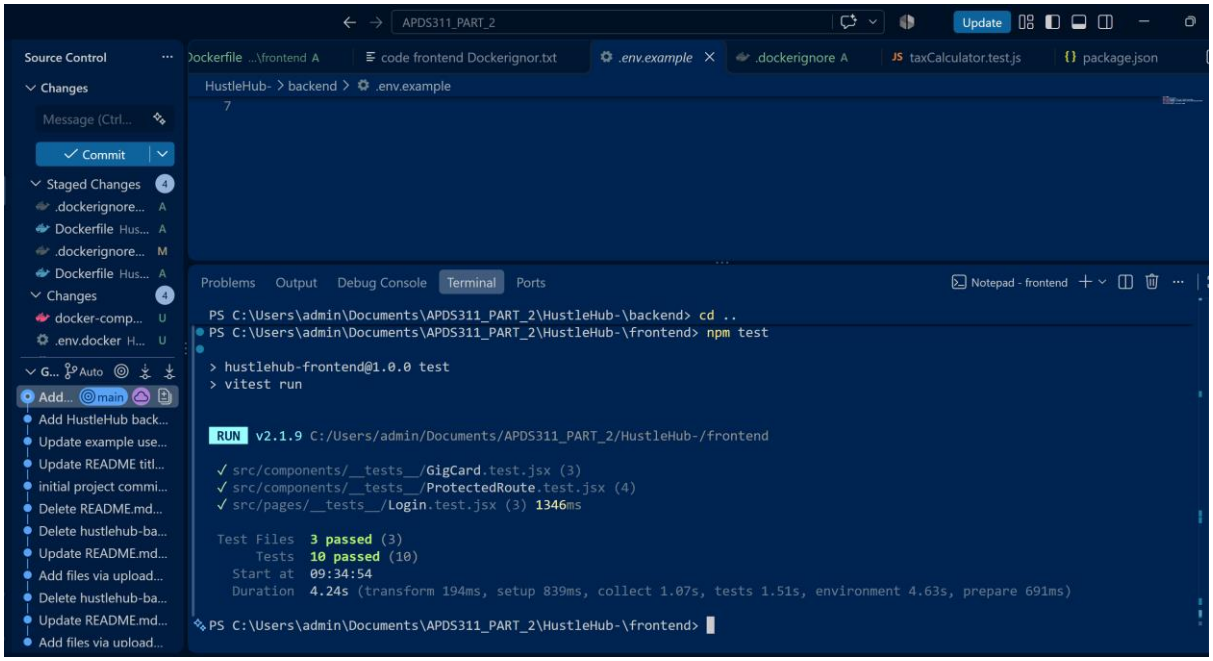

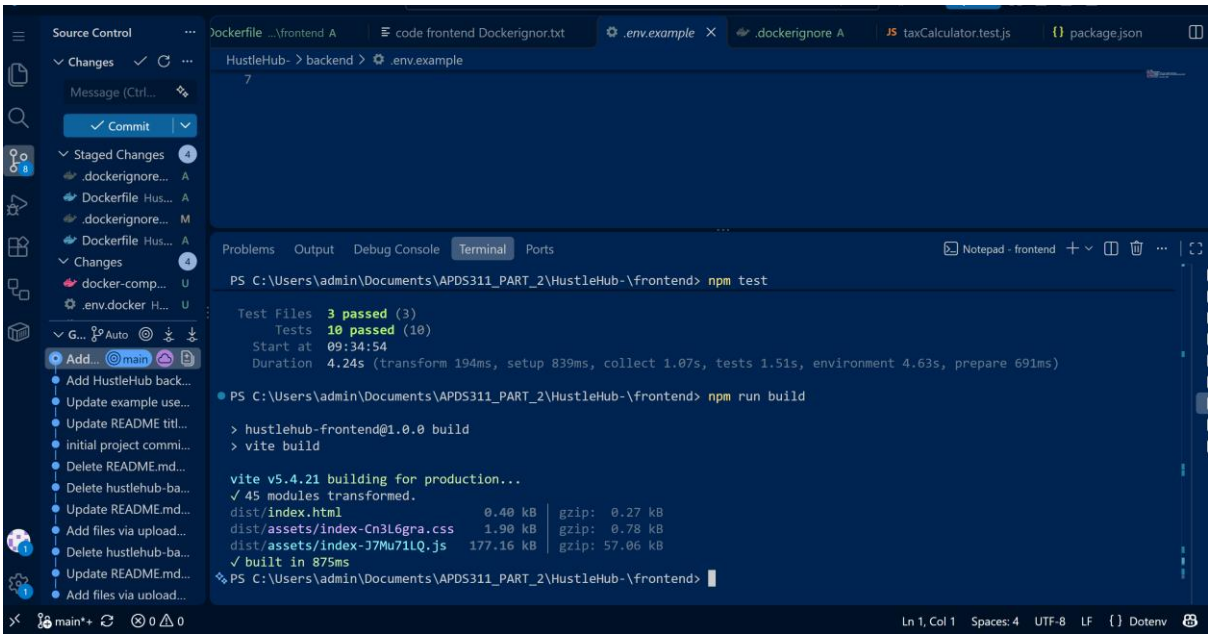

5. Backend test results (4 passed).

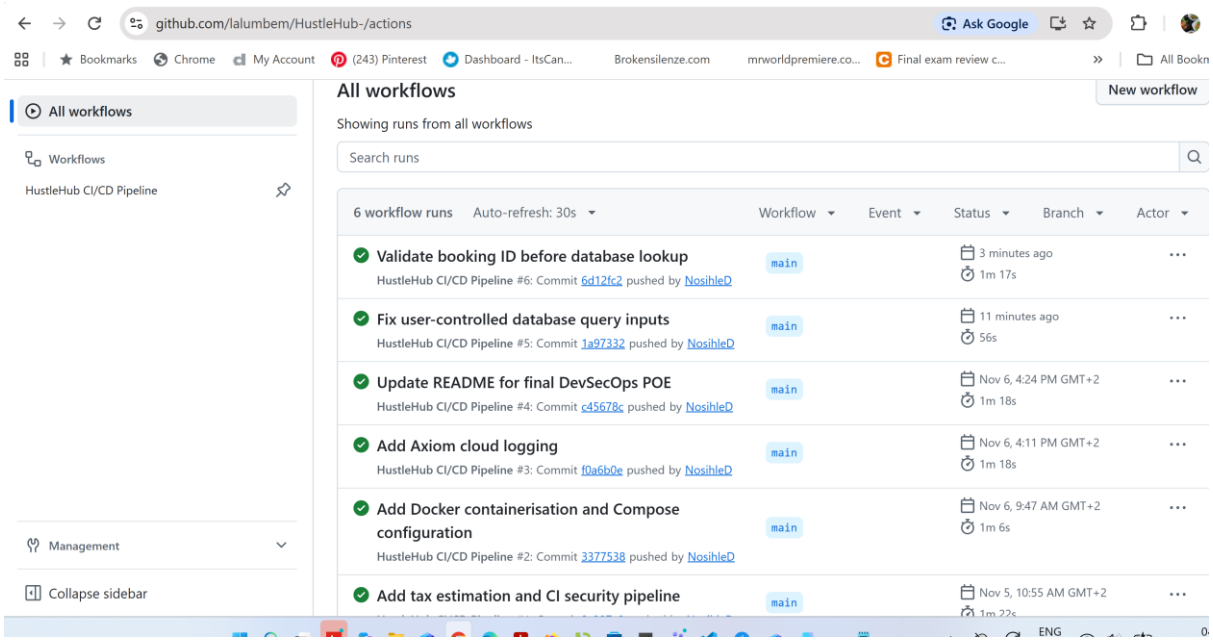

6. Frontend test results (10 passed).

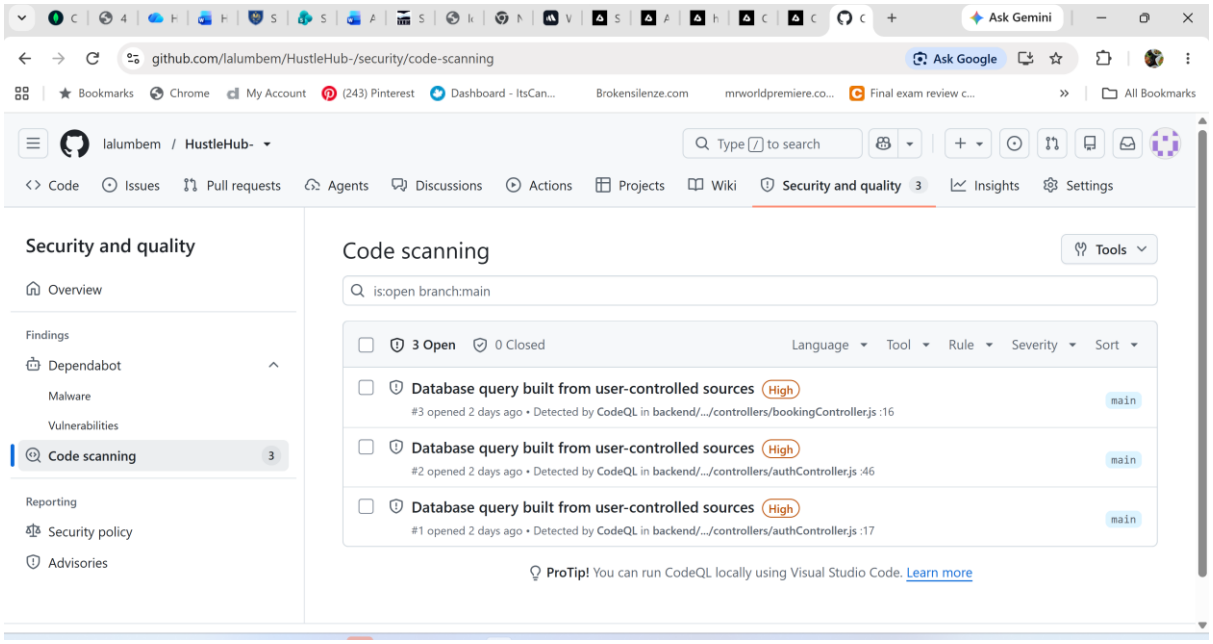

- Production Build test

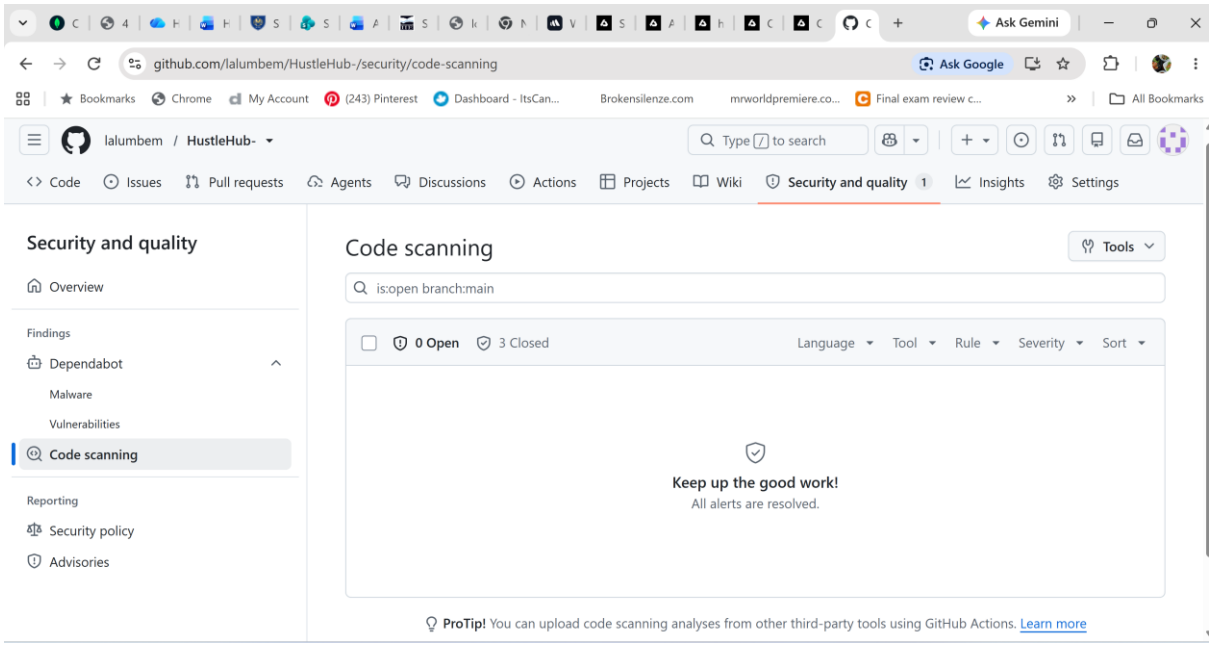

7. GitHub Actions showing latest successful workflow and all jobs are green.

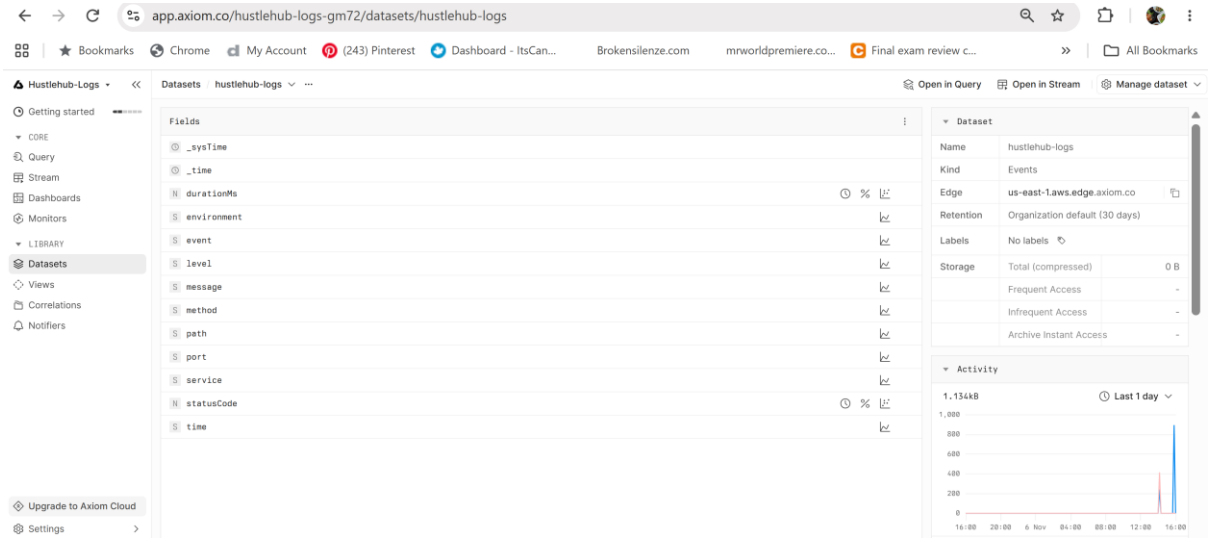

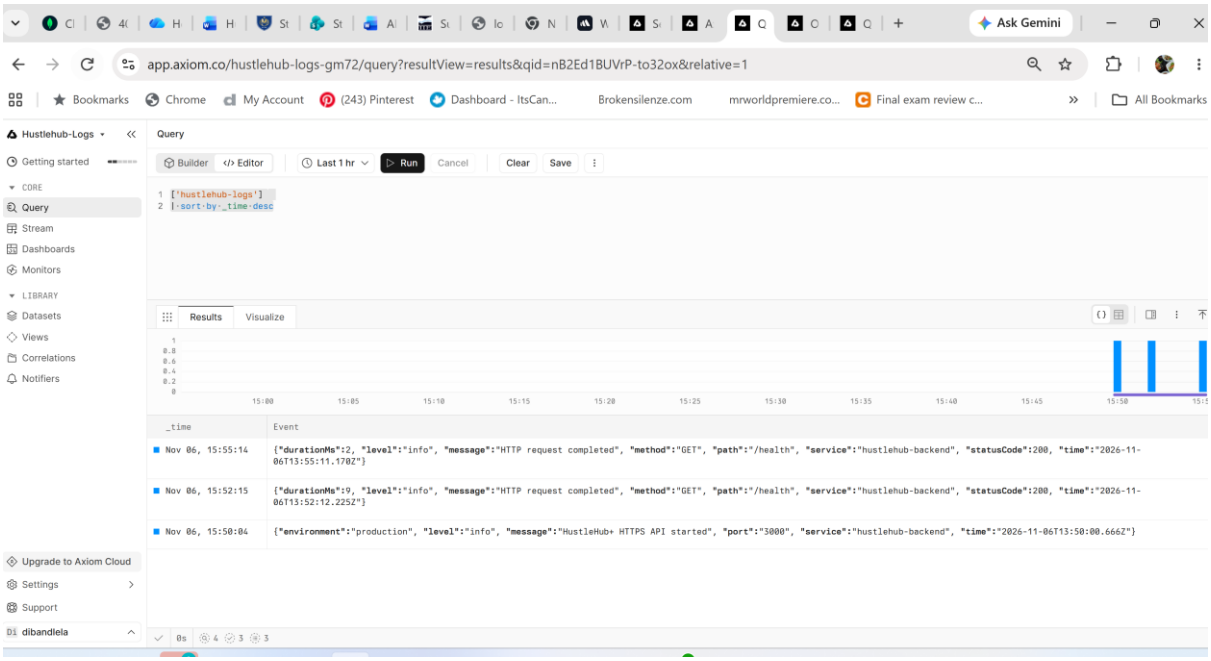

8. CodeQL intergration showing zero open alerts.

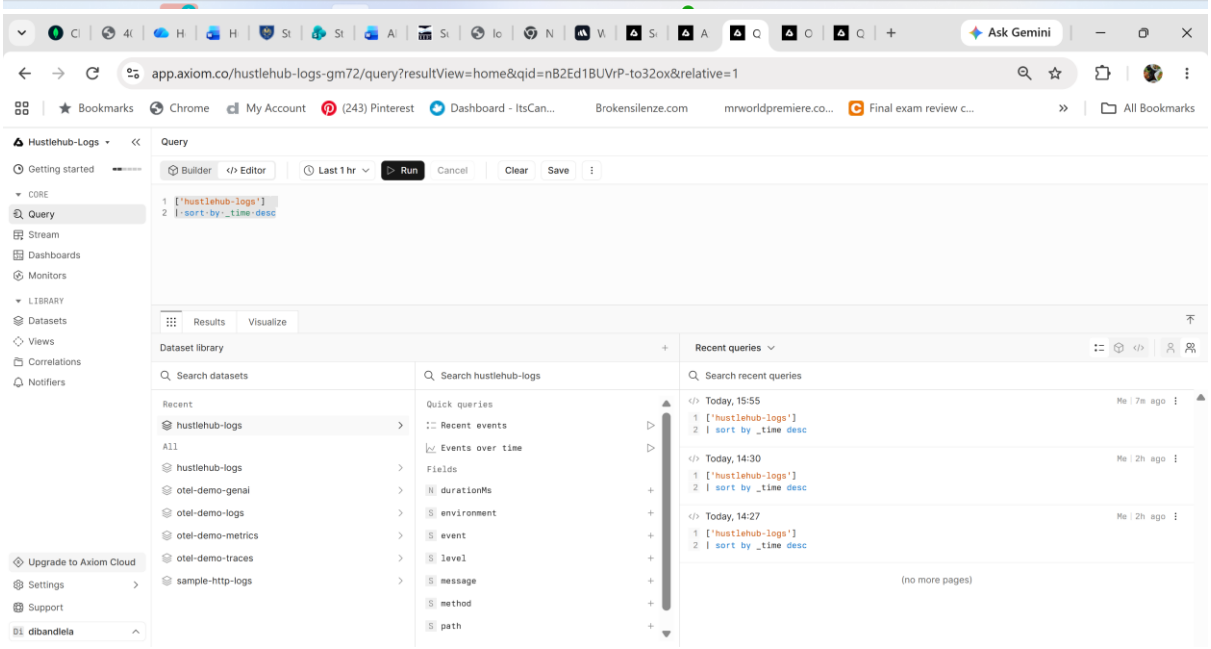

9. Axiom showing incoming HustleHub backend logs.
